

American plaice

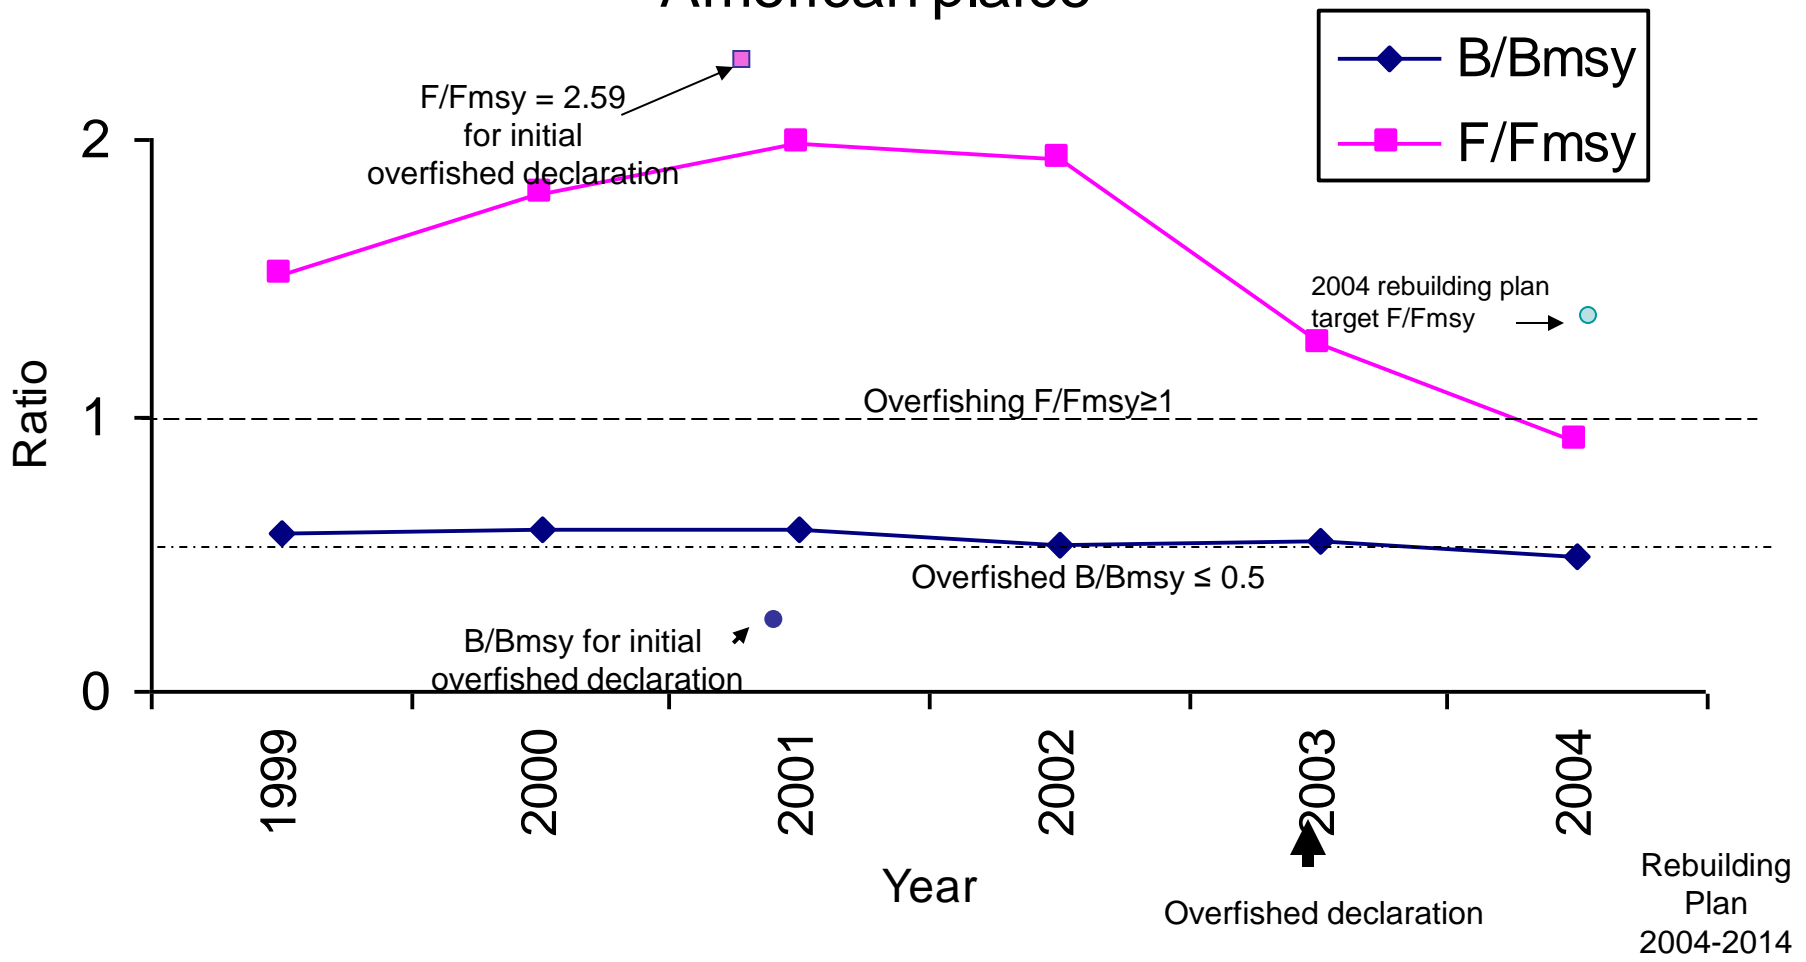

Figure C1. Northeast Region American plaice has a controlled fishing mortality and biomass has not increasing as expected.

bigeye tuna - Atlantic

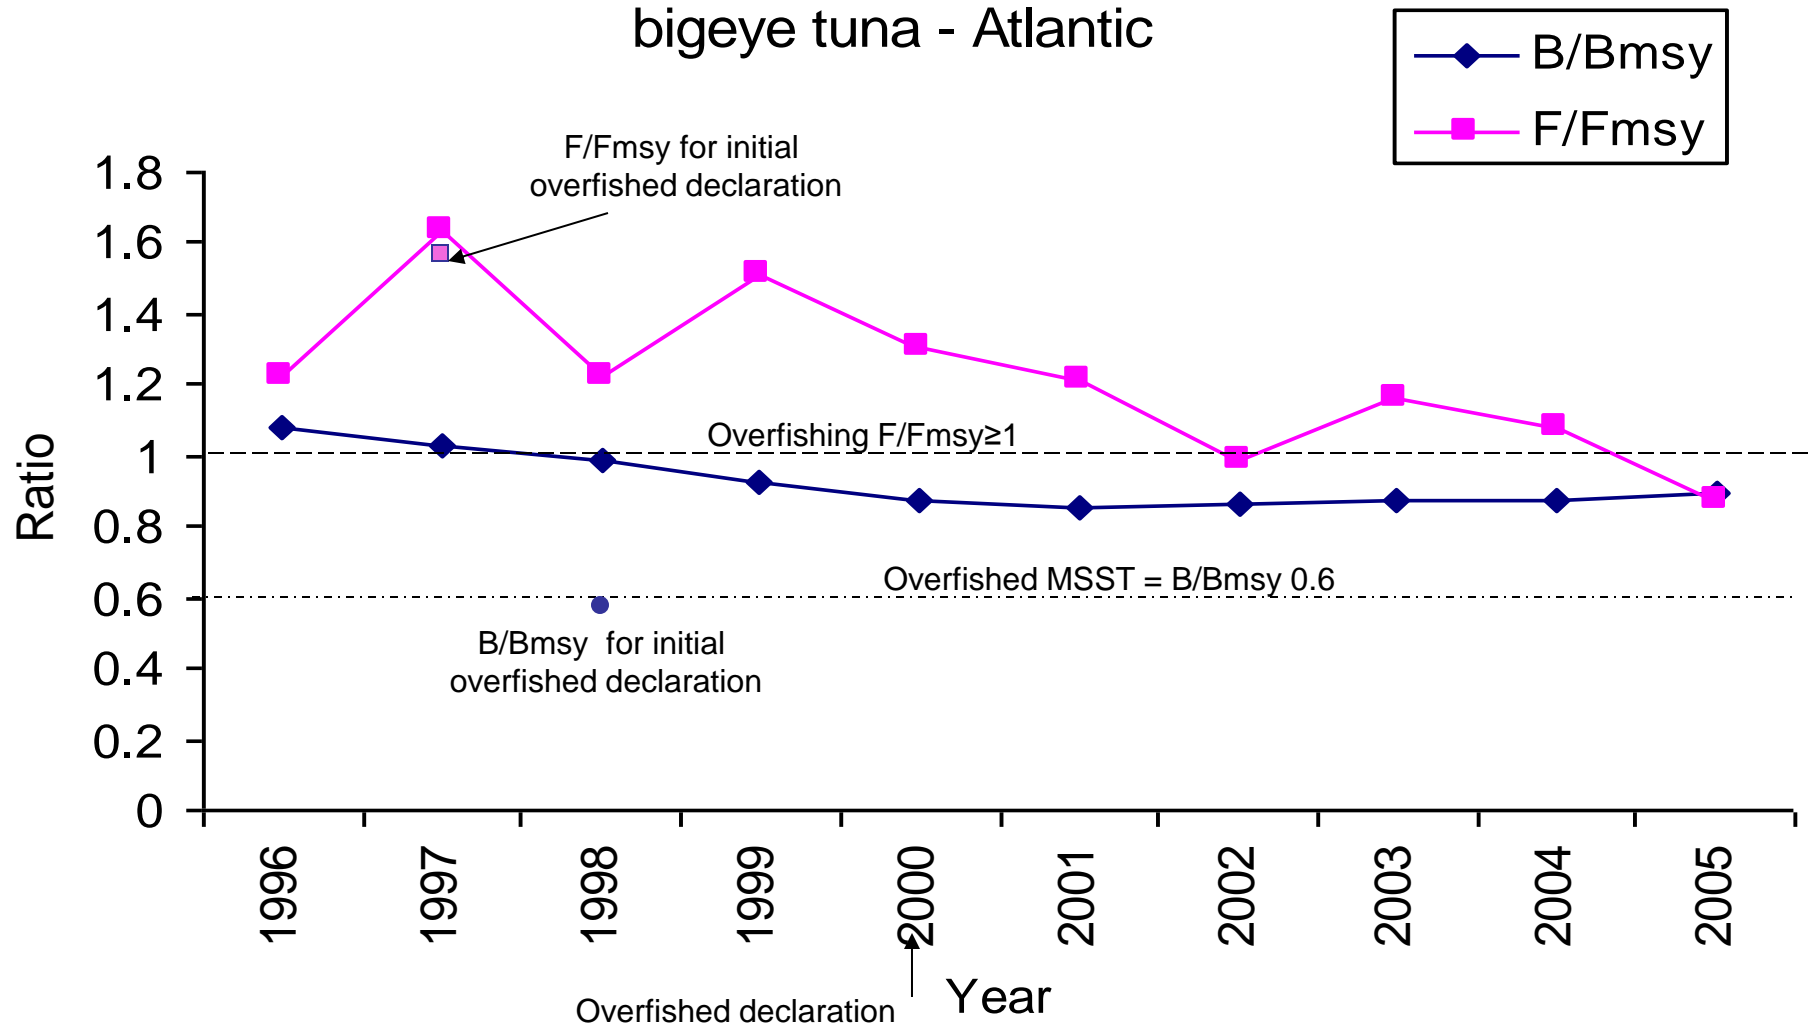

Figure C2. Highly Migratory Species bigeye tuna - Atlantic has a controlled fishing mortality but biomass is not increasing as expected. FMP not internationally implemented

ocean pout

Ratio

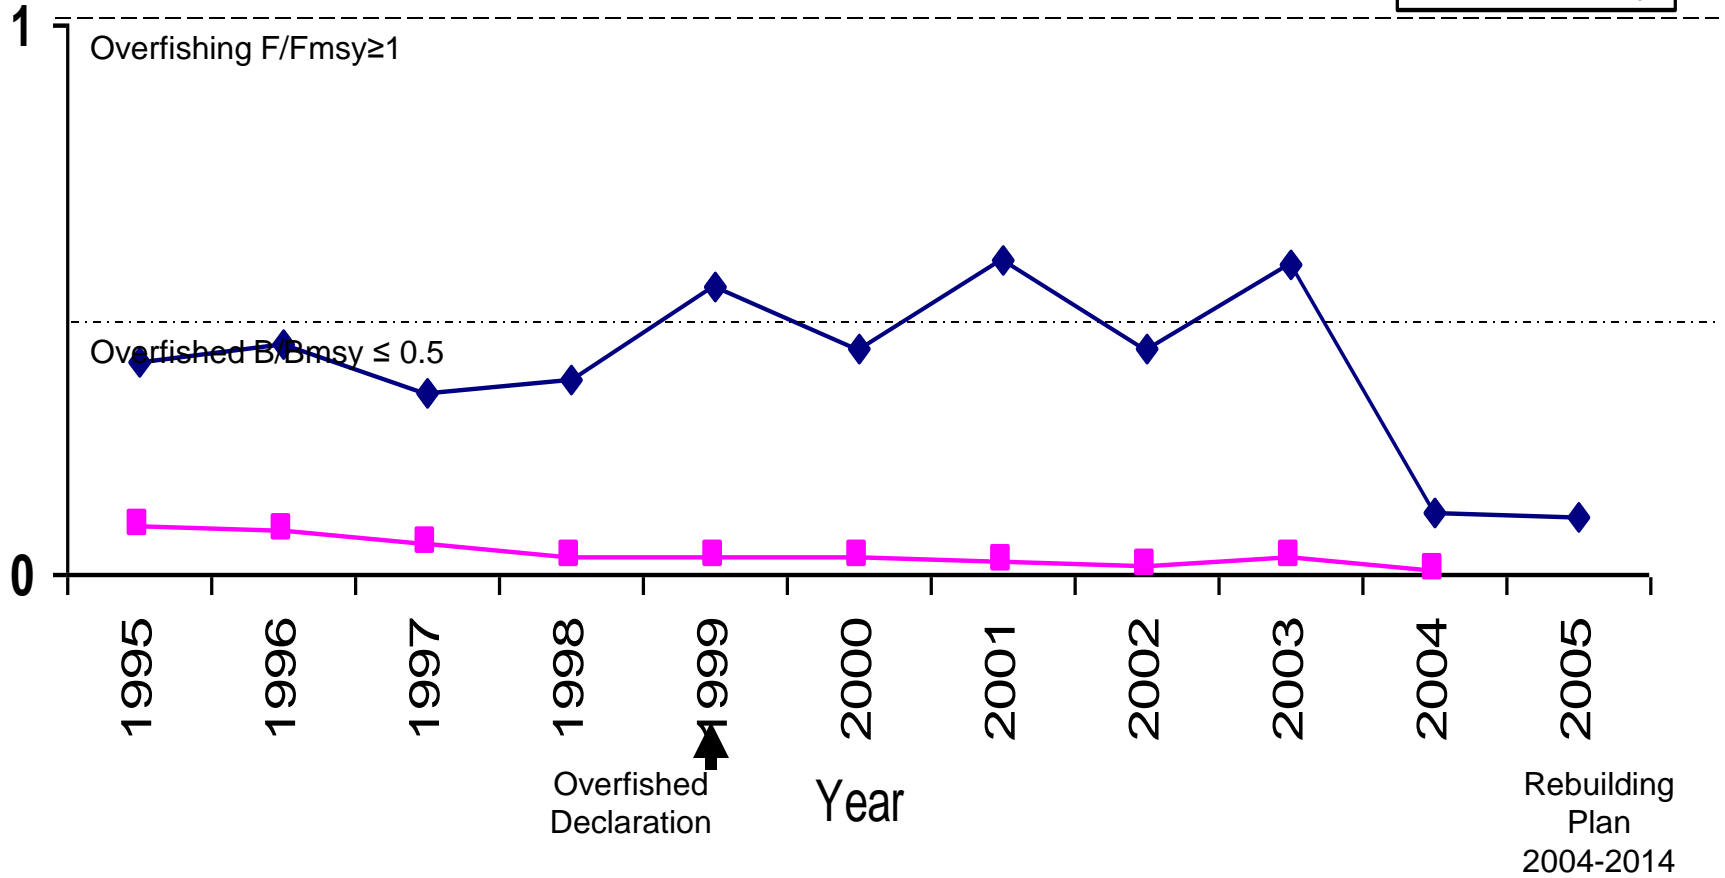

Figure C3. Northeast Region ocean pout has a controlled fishing mortality but biomass has not increased as expected. B_{msy} proxy is in kg/tow.

sandbar shark

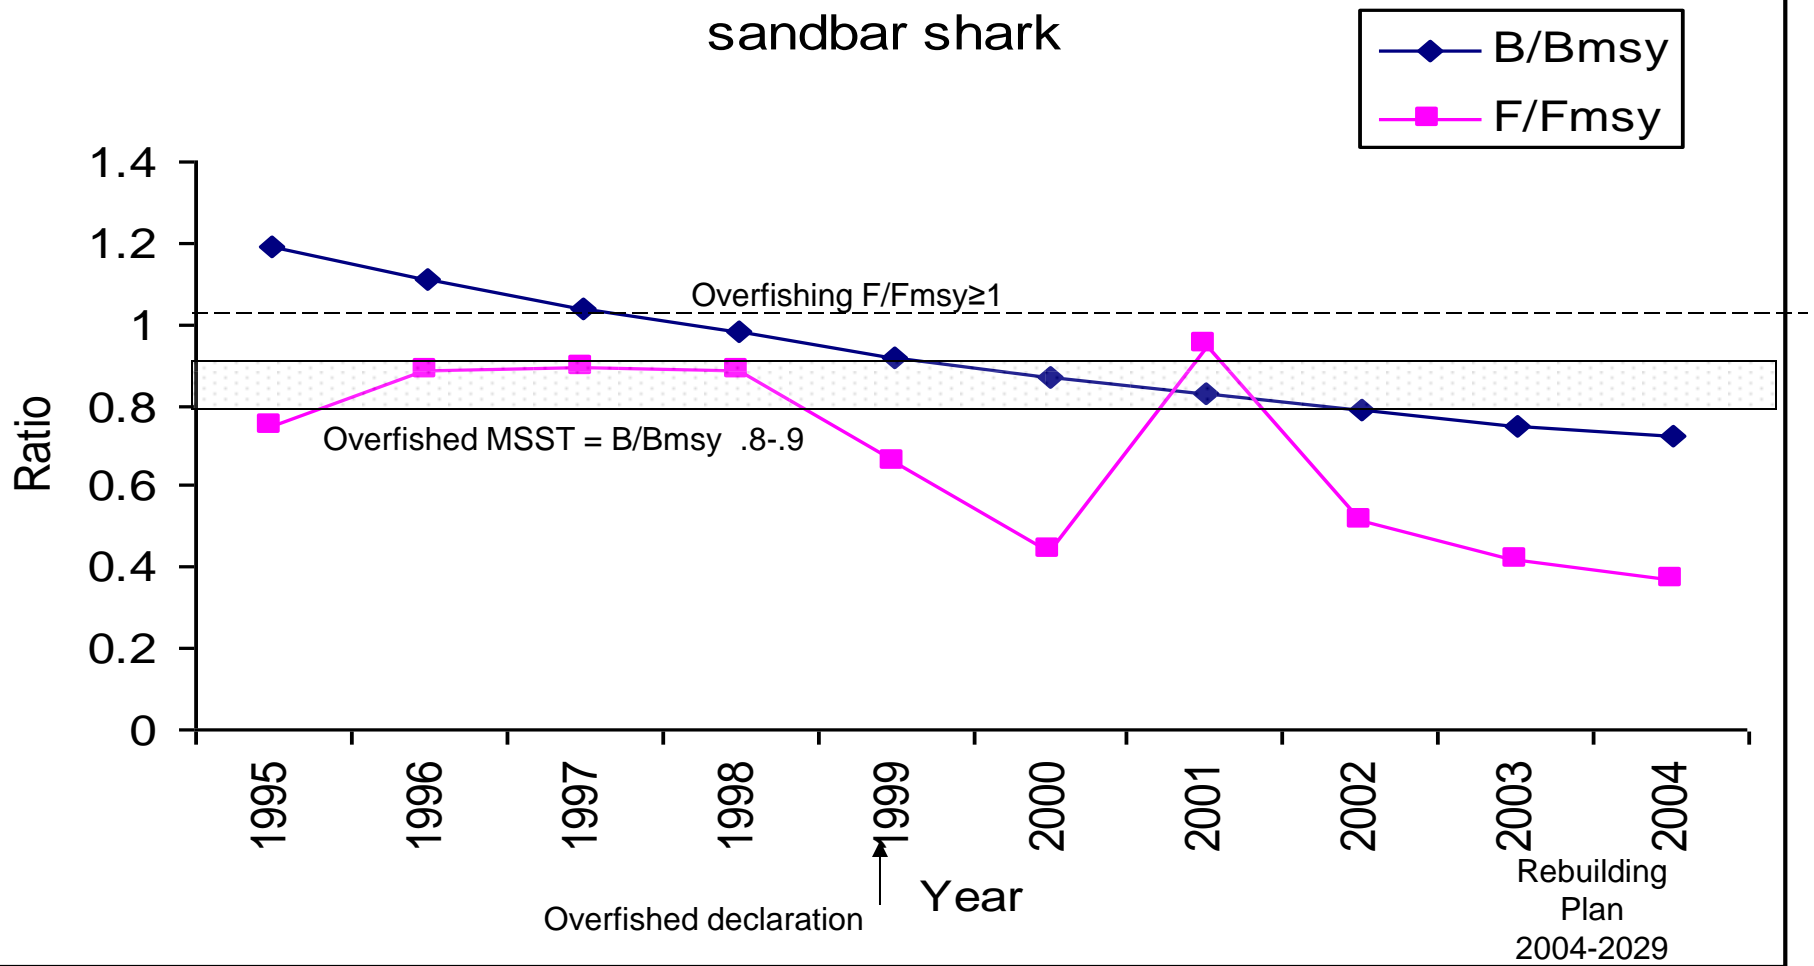

Figure C4. Highly Migratory Species sandbar shark has a controlled fishing mortality but biomass is not increasing as expected. FMP not internationally implemented

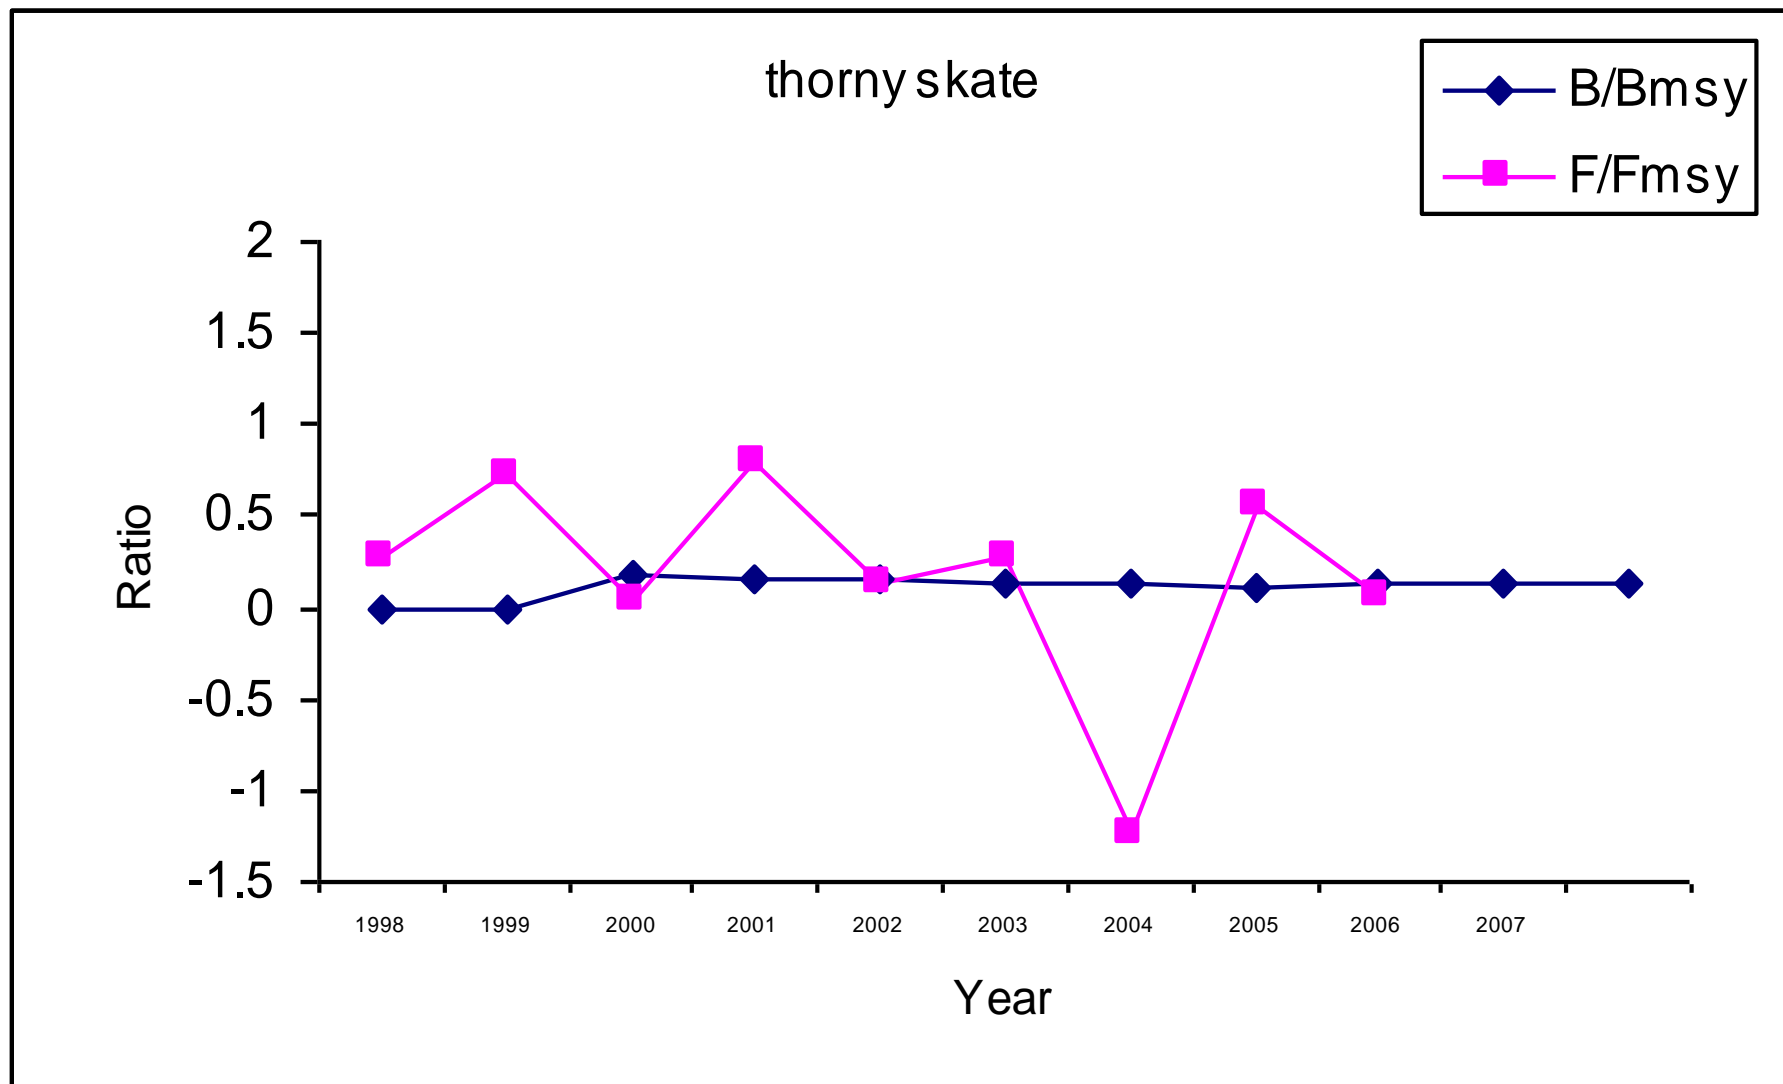

Figure C4. Northeast Region thorny skate shark has a controlled fishing mortality but biomass is not increasing as expected. B_{msy} proxy is in kg/tow.
*Skate stocks F/F_{msy} are measured by percent change over a 3 year period.

windowpane flounder - SNE/MA

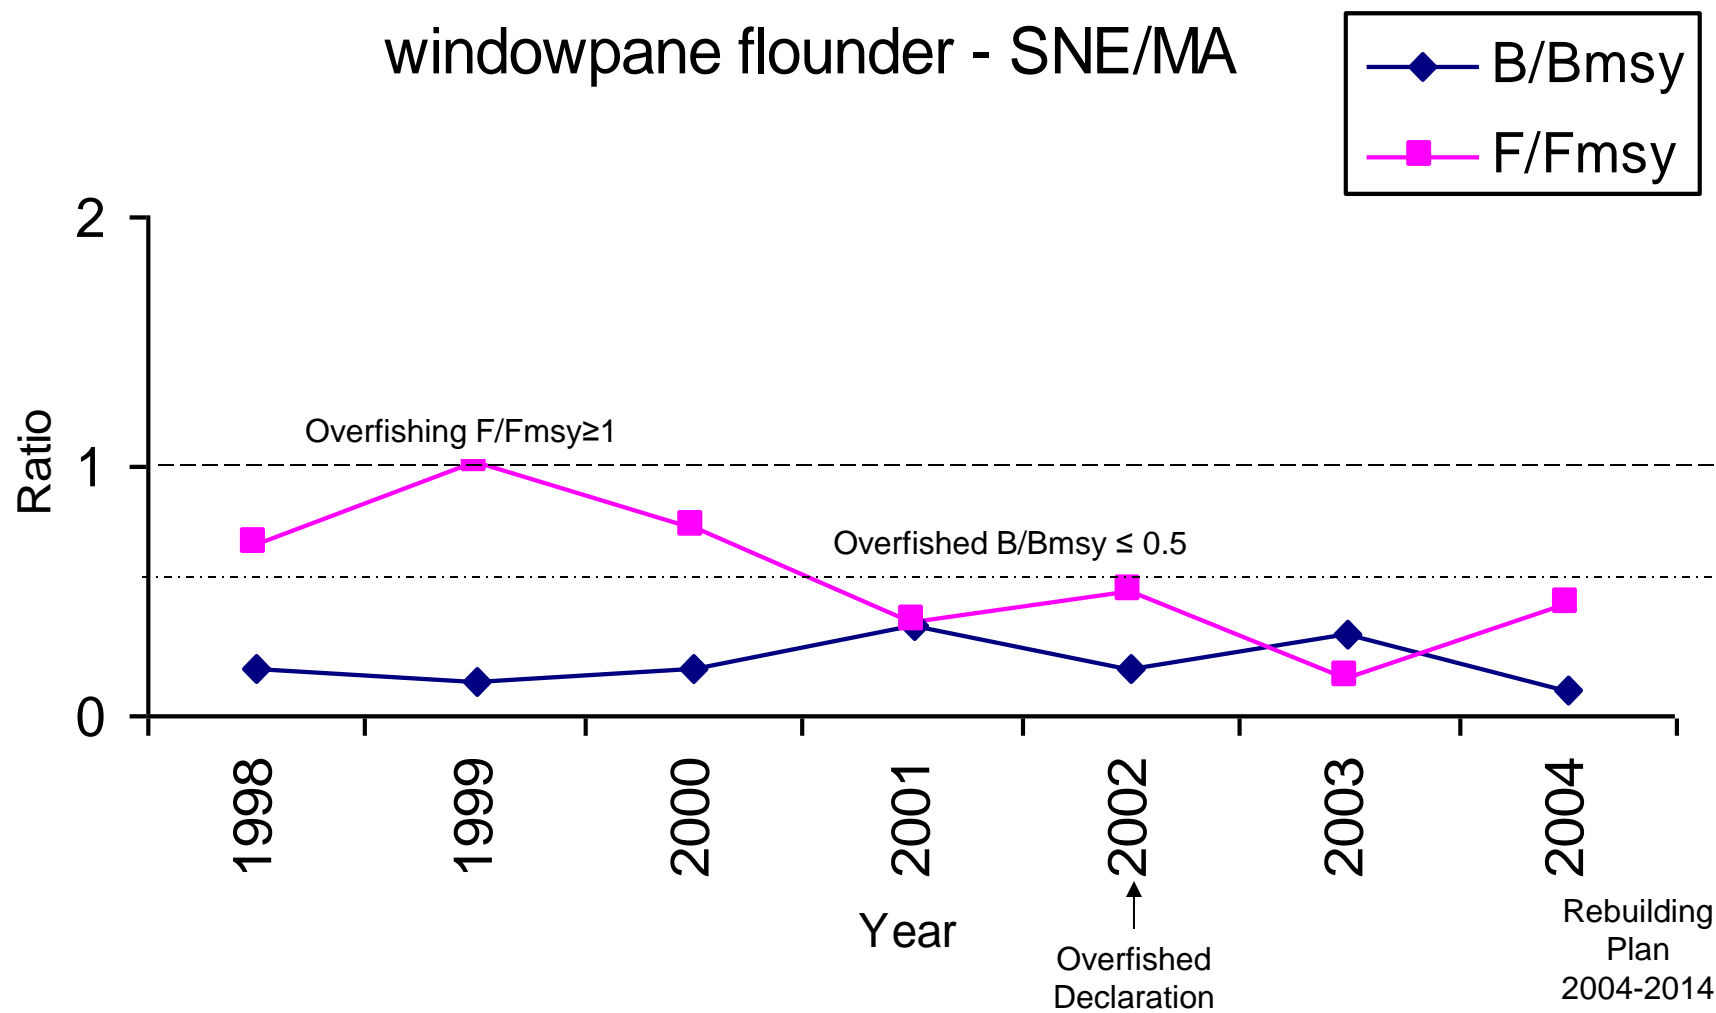

Figure C6. Northeast Region windowpane flounder – Southern New England / Mid-Atlantic Bight has a controlled fishing mortality but biomass has not increased as expected. B_{msy} proxy is in kg/tow.
